

# 6 WAYS

FOR PROPERTY OWNERS TO  
INCREASE ENERGY EFFICIENCY

1

## Clear Outdoor Condenser Units

Make sure the unit is free from overgrown grass, debris, or anything that blocks airflow.

2

## Educate Tenants on Energy Saving Behaviors

Share energy-saving tips with tenants so they know how to conserve energy. Include tips on how to use building-specific appliances.

3

## Make Energy Efficient Upgrades

Focus on upgrades like insulation, air sealing, ductwork repair, and Energy Star rated appliances that provide the best savings for low costs.

4

## Open Registers

Ensure vents are open and unobstructed to allow cool air to circulate.

5

## Adjust Ductwork

Check that duct dampers are set for summer use and allow maximum airflow. Do this seasonally.

6

## Inspect HVAC

Make sure that the HVAC system is working properly and that air filters are replaced often.
