City-wide Map Information on line at:

[City of Cincinnati - Snow Priority Routes](#)
EXECUTIVE SUMMARY

The Department of Public Service (DPS) Snow and Ice Control Plan is designed to serve as an operational guide for the City of Cincinnati outlining the effective use of resources, identifying effective communication strategies and defining the levels of service residents can anticipate. This plan strives to maximize services while minimizing the impact to the environment as well as being cost efficient.

The goal of DPS is to remove snow and ice from Cincinnati roadways as rapidly and practically as possible. This does not always mean pavement will be bare and dry, but it will be passable. While the severity of each winter storm is unpredictable, DPS will continue to work within its resources to maintain the highest level of customer service possible while balancing efficiency in snow and ice control.

Snow and ice control can account for more than 33% of the division’s budget. Therefore, a well planned and executed winter operations plan is imperative. Preparation includes an analysis of the previous year’s issues and challenges, equipment readiness, manpower, emergency equipment rental, training, material inventory and current technology.

The Traffic and Roads Operations Division (TROD) of DPS is responsible for coordinating winter roadway safety for approximately 3112 lane miles. These lane miles consist of thoroughfares, bridges, overpasses, side streets, cul-de-sacs and alleyways. Priority routes are determined by traffic volume, access to emergency routes, access to public transportation, and access to schools. The priority plan for snow removal divides streets into 67 primary routes, 97 residential routes and 54 (priority 3) pickup truck routes.

Individual snow events in Cincinnati vary in severity. During a typical winter, Cincinnati averages 20 to 25 inches of accumulation with temperatures of 20°F and above. A variety of factors are considered when preparing for a snow-and-ice event.

Factors include:

- rate and accumulation of snowfall
- moisture content
- presence of sleet and freezing rain
- temperature during and after storm
- wind velocity
- time of day
- storm duration
- intervals between storms

These various factors are considered when establishing protocols. Depending on the response necessary for the event, snow removal operations will include primarily the DPS Divisions: TROD, Facilities Management, Fleet and Neighborhood Operations; however, this may include other City agencies and staff depending on the magnitude of the weather event.

Making the City of Cincinnati’s Snow and Ice Control Plan effective requires the cooperation of many partners, including, but not limited to, DPS, emergency responders, and most importantly, the residents of Cincinnati. This document is divided into categories. Each category contains practices DPS has developed, adopted and/or tested for the purpose of enhancing snow and ice control. This plan is updated annually.
COMMUNICATIONS

The Winter Operations communications program is designed to keep Cincinnati residents informed of DPS’ efforts to ensure safe driving conditions whenever there is potential for significant weather.

CUSTOMER SERVICE

DPS executes snow and ice control from the City’s Customer Service Center. During a snow event, the Customer Service Center maintains various staffing levels up to 24 hours a day to assist with operations, police, fire and service requests.

Customer Service Phone based Service Requests
- Customer Service staff monitors the (513) 591-6000 phone line and enters service requests into the Customer Service Request (CSR) system.

Customer Service Phone App Service Requests
- Service requests can be entered in the “Fix It Cincy!” app for iPhones and Androids. Requests can also be submitted at 5916000.com.

Dispatching
- Customer Service works in conjunction with the operations staff to ensure crews are systematically treating routes.
- Customer Service notifies crews of specific complaints and emergency conditions which need to be addressed by the operations crews.

Customer Service Web-based Service Requests
- The CincyInsights project is an extension of the City of Cincinnati’s overall commitment to transparency and data-driven government innovation. The CincyInsights website features 15 dashboards that contain various datasets. Dashboards range from real-time snow plow tracking information to in-progress road projects. Access to these dashboards is made easily available via links posted on the City’s website as well as open data portal. You may access the CincyInsights website here: [https://insights.cincinnati-oh.gov/](https://insights.cincinnati-oh.gov/) or you may find additional City datasets on the Open Data Cincinnati portal: [https://data.cincinnati-oh.gov/](https://data.cincinnati-oh.gov/).

Media Request Intake
- Media outlets contact the Customer Service Center to request information or to schedule a phone/camera interview.
- The Customer Service Representative receiving the request enters a service request which notifies the Public Information team, Operations Superintendent, and Department Director. Media may also reach out directly to a representative of the Public Information team.

PUBLIC INFORMATION

Message Development
- On an ongoing basis, operations managers are responsible for providing operational and logistical information as well as road conditions to the Public Information staff. During larger events, formal planning meetings help facilitate information sharing.
- The Public Information staff is responsible for preparing and distributing communications.

Message Distribution
- Media releases are published to coincide with broadcast media cycles. Typically, press releases are published at 3:30 a.m., 10:30 a.m., 3:30 p.m., and 9:00 p.m. during a winter weather event.
Social Media Responses

- The Public Information team monitors social media accounts and responds to questions/concerns as efficiently as possible. While DPS will monitor social media accounts, residents are encouraged to submit service requests via the City’s call center, website or mobile applications to ensure a rapid response.

GENERAL GUIDELINES

MONITORING SNOW/ICE EVENTS
Beginning in November and continuing through March, DPS monitors the weather forecasts for any approaching winter storm. The weather monitoring service is vital to operations as it predicts local weather and road conditions. Daily forecasts include snow and ice warnings, as well as extended weather forecasts and predicted pavement temperatures. Pavement temperatures are also monitored by mounted temperature controls attached to vehicles and handheld devices carried by supervisors. This information assists the department in determining the type, timing and duration of snow and ice operations. Forecasts are sent electronically to DPS seven days a week at a minimum of two times per day. The department reviews these reports, as well as local media outlets and forecasts from the National Weather Service.

PLANNING FOR SNOW/ICE EVENTS
Staff continuously monitor weather conditions and will begin planning once a storm is forecasted. Each storm is individually evaluated during a pre-event planning meeting. This meeting is used to develop an operations plan. A basic plan will examine the following:
- Type of event
- Expected accumulation
- Predicated pavement temperature
- Materials inventory
- Treatment types
- Usage strategy
  - Pretreating ahead of the event (anti-icing)
  - Treating during an event (de-icing)
- Condition and availability of equipment
- Scheduling of crews
  - Depending on the expected size, duration and temperature of the event, crews may work 12-hour shifts (7 a.m. to 7 p.m. /7 p.m. to 7 a.m.) or smaller teams may be deployed.
- Scheduled public activities
  - Conventions, concerts and sporting events, etc. are all taken into consideration when developing a response plan.

STRATEGIES
DPS deploys two strategies when pretreating and treating roadways: anti-icing and de-icing. While both strategies make use of chemical freezing point depressants, they differ in fundamental objective. Anti-icing techniques are used to prevent the formation or development of bonded snow and ice by timely applications of a chemical. This strategy is a proactive approach and used before or at the very beginning of a storm, typically on dry pavement. De-icing techniques are used as a bond-breaking method only after snow or ice has accumulated and bonded to the road.

Anti-icing begins with the use of dry, liquid or pre-wetted materials. Crews will proactively anti-ice bridges, hills and overpasses on a regular schedule during the winter season. Because of the increased danger to the public, these locations are given special attention. These locations remain on a regular schedule throughout the winter season as they’re more susceptible to ice.

Other locations will receive pretreatment based on predictions from the weather forecast. It is important to note streets not receiving anti-icing material before the snowfall may not receive material until the pavement temperature has dropped and pavement conditions are wet, slushy or covered in light snow, to avoid wasting material that could possibly be plowed away.
De-icing techniques begin with plowing, using dry or liquid materials, application of heat (friction) or a combination of these practices. Rock salt has generally been used as a de-icing agent in the past as it was once the most economical option and available in large quantities. However, this is no longer practical as the cost of salt has increased.

The method of applying salt to pavement is only effective when temperatures are above 20° to 25°F, there is sufficient precipitation or moisture on pavement, and traffic volumes are appropriate. Salt, a dry de-icing chemical, becomes effective once wet and dissolves into a brine solution. When pavement becomes wet, it uses moisture from water, snow or slush on the road service to make brine.

During unusual circumstances, it may become necessary to employ measures to provide temporary traction or de-icing material conservation through the use of abrasives. Sand, which is considered an abrasive, can be used when snow bonds are formed and rapid, increased friction is required. If temperatures reach a level too cold for chemical de-icers to work, DPS will use sand to provide for better traction. Once bond is broken and sufficient snow and ice are removed, the department can return to preventive anti-icing operations.

Plowing is the most effective practice of removing compacted snow or loose ice before applying chemicals. If pavement and snow are cold and dry, and the snow in tire tracks is not adhering to the pavement, application of chemicals will have an insignificant effect. Plowing at this point is the appropriate operation.

When large amounts of accumulation occur where plowing is not possible, snow is hauled away. Crews haul the snow using backhoes and frontend loaders to fill trucks and haul the snow to an authorized snow dumping area.

**MATERIALS**

The City of Cincinnati has the capability to stockpile a maximum of 27,000 tons of rock salt (sodium chloride), 57,000 gallons of calcium chloride, 63,000 gallons of salt brine and 21,500 gallons of beet juice. These materials are strategically stationed across Cincinnati to allow for efficient operations (Appendix A). In addition, the City will contract for additional resources to ensure stockpiles are able to be replenished throughout the winter season.

When temperatures fall below 20°F, liquid calcium chloride and/or beet juice will be applied to every ton of salt (sodium chloride) to treat the pavement. This process of pre-wetting provides the moisture necessary to make brine, which speeds up the melting process. Applying a pre-wetting material to salt minimizes scatter during application by as much as 40%, reducing the need for repeated applications.

**Liquid Calcium Chloride** is used in pre-wetting, anti-icing and solid blend applications. The benefits of liquid calcium chloride provide the moisture needed to form liquid brine and initiate melting action. Once melting begins, the bond between ice and pavement can be broken allowing for mechanical removal.

**Beet Juice**, a byproduct of the sugar beet, is an organic compound that reduces the environmental effects associated with salt. Beet juice, in conjunction with salt, has many advantages; it is environmentally safe, has longer residual effects and is effective at much colder temperatures (-20°F).
LEVEL OF SERVICE/PRIORITIES
Street prioritizations were developed using the Cincinnati Area Geographic Information System (CAGIS), a division of Enterprise Technology Solutions (ETS) mapping systems. All major arteries, feeders, alleys, etc. are included in the City’s Snow and Ice Control Plan.

Streets are treated and plowed based on three categories of route priorities: primary, residential and pickup (Appendix B)
- Primary routes include major thoroughfares and hospital routes
- Residential routes are pathways off major thoroughfares and are still accessible with larger trucks
- Pickup routes are streets that can only be accessed with smaller trucks

All routes are treated by priority beginning with primary.

Routes are divided into four regions: North, South, East and West. Crews from these locations address the prioritized snow routes. Supervisors are responsible for directing and coordinating crews to complete snow and ice removal in accordance with the established priority routes. Close radio communication is maintained with all operators to keep abreast of progress on each route.

When conditions become too severe for traffic flow and parking must be restricted, the City Manager will declare a snow emergency. When a snow emergency is declared, parking is prohibited on Snow Emergency Routes (Appendix C). Vehicles parked are moved to an area designated by the Cincinnati Police Department. Car owners can retrieve their vehicles by calling (513) 591-6000.

GARBAGE COLLECTION
The Neighborhood Operations Division (NOD) of DPS will provide garbage collection in most weather conditions. In emergency situations, such as heavy snow and ice, garbage collection may be temporarily suspended for the safety of employees. When collections are temporarily suspended, local media outlets will be notified to provide information to the public. DPS will utilize social media and its website to inform the community, as well.
The following summarizes the snow removal actions for specific weather events:

During the winter months, one section/yard will provide slippery street operational coverage. The Supervisor will monitor weather conditions and respond to requests for service that cannot be handled by our Emergency Service Representatives. This includes calling in enough personnel to handle requests for service and activating other division personnel.

The highlighted lines below indicate a switch in rotation of yards; this was done to come closer to equalizing the amount of holidays (denoted by *) covered by each yard.

A critical factor to an effective and efficient snow and ice removal program is equipment maintenance and availability. It has been established through past research that the benefits of a comprehensive equipment maintenance management program can yield positive results.

Due to the severe nature of the environment for snow and ice control, winter operations fleet requires the highest level of equipment maintenance. To keep equipment in top condition, a regular maintenance routine is followed all winter.

Cleaning all equipment with truck wash and neutralizer is critical to control maintenance costs and reduce downtime. This includes pressure washing truck surfaces, undercarriage, plows and material spreaders. When the operator finishes cleaning the equipment it is inspected to identify and report repairs that need to be made before the next event.

- **Pre-trip Checklist**
  - A pre-trip checklist is required for commercial driver’s license (CDL) compliance. Following the checklist will help prevent equipment failures. In addition to the pre-trip inspection, the following list should be used for the pre-trip inspection as well as the inspection performed when the event is over and the unit has been cleaned:
    - **Spreaders**: Inspect pumps, hoses, controls, and fittings. Check spinners, augers, and auxiliary engines.
    - **Hydraulic spreader controls**: The two major components are the pump and the controls, whether manual or automatic. Operators need to be familiar with spreader controls. Understand how the auger, or conveyor, and the spinner react at various settings.
    - **Snow plow blades**: Inspect blades thoroughly after each use. If blade wear is excessive it may damage the moldboard. Since snow plow blades do not wear evenly, they need to be replaced when they are worn at any point. Operators should check blade wear throughout the storm.
# WINTER OPS TRUCK ASSIGNMENTS 2019/2020

SIDEWALKS AND SNOW

Ohio Revised Code 723.011 authorizes the City of Cincinnati to require property owners to remove snow and ice from abutting or adjoining sidewalks in a timely manner.

What does this mean?
A property owner is responsible for keeping his or her property safe. If a postal worker, delivery worker or a visitor falls because you didn’t shovel and salt your walkway, you could be responsible for covering that person’s injuries.

Am I liable if I shovel my sidewalk and it freezes again, then someone falls?
The Ohio Supreme Court has affirmed residents can comply with Municipal Code’s requirement to shovel their sidewalks without assuming liability to others who may slip and fall. The only time a resident may become liable is when they permit or create a dangerous accumulation of snow that results in personal injury to another.

- Section 723-57 of the Cincinnati Municipal Code requires property owners to remove snow.
- Section 723-59 of the Cincinnati Municipal Code requires property owners to remove ice.
- ORC 723.011 (Ohio Revised Code) The penalty for violating these sections is a fine of $25.

Please be a Good Neighbor: Do your part in helping fellow residents and visitors – especially the elderly and those with disabilities – navigate through the difficulties of winter.
WHAT RESIDENTS CAN DO TO HELP

• Shovel snow onto grassy area of your property when clearing driveways/sidewalks.
• Avoid shoveling snow from your driveway onto City roadways. This will help keep the City’s streets from re-icing when already treated.
• Apply salt, sand and/or cat litter to icy steps and paths.
• Assist with clearing snow surrounding fire hydrants.
• Shovel around storm drains as necessary to minimize the risk of black ice as snow starts to melt.
• Adopt a storm drain near your residence to assist the City in keeping its approximately 30,000 storm drains properly draining.
• Use off-street parking during snow events to allow crews to work safely, efficiently and quickly.
• Be observant of snow parking restrictions and emergency declarations when in effect.
• Drive with extra care and leave additional distance between you and the vehicle ahead.
• Maintain a distance of no less than 100 feet behind a City vehicle.
• Avoid passing snow trucks.

And, ultimately, exercise patience!
Understand it takes time for the City to clear its 3,112 miles of road following a snow event.
WINTER SAFETY TIPS

• Citizens can reduce risk and assist snow removal efforts by parking off-street where possible.
• Motorists should allow extra driving time and use extra caution.
• Reduce speed and leave plenty of room to stop. Citizens are encouraged to allow at least three times more space than usual between their vehicle and the car in front.
• Brake gently to avoid skidding. If your wheels start to lock up, ease off the brake.
• Turn on headlights to increase visibility.
• Keep headlights and windshield clean.
• Use low gears to maintain traction, especially on hills.
• Extend caution while traveling on bridges, overpasses and infrequently traveled roads. Even at temperatures above freezing, if the conditions are wet, you might encounter ice on exposed roadways like bridges.
• Pour sand, cat litter, gravel or salt in the path of the wheels to help improve traction.
Winter conditions offer a unique set of challenges for bicycle commuters. Follow these tips when commuting in the winter, especially during winter weather events:

- Choose a route based on winter road priorities. Main thoroughfares have the least amount of snow and ice. Remember snow-covered roads mean narrow thoroughfares.
- Beware of potholes, puddles and snow banks.
- Install knobby or studded tires.
- If losing control, move your bike toward a snow bank.
- Pedal in a low gear during the winter. If your pedal is frozen in low, bikers can still pedal in most terrains.
- Try not to make sudden emergency maneuvers. Wet, slushy roads mean reduced stopping power and extended braking distances.
- Wear well-layered clothing to regulate body temperature and stay dry.
- Wear blade-style glasses or goggles to keep your eyes from watering and keep flying road grit out of your eyes.
- Wear warm, windproof gloves.
- The City of Cincinnati does not plow bike lanes.

**MAP**: Winter Operations by District and Neighborhood

*REVISED: Nov. 3, 2015, Traffic Engineering*
APPENDIX B: PARKING SNOW EMERGENCY ROUTES

Routes are designated by signs stating "No Parking during Snow Emergency."

**Police District 1**
- Reading Road: Central Parkway to Paddock Road
- Vine Street: Mitchell Avenue to Third Street
- Gilbert Avenue: Broadway to McMillan Street

**Police District 2**
- Eastern Avenue: Delta Avenue to Second Street
- Eastern Avenue: Delta Avenue to Columbia Parkway
- Madison Road: Woodburn Avenue to Plainville
- Marburg Avenue: Ridge Road to Erie Avenue
- Whetsel Avenue: Bramble Avenue to North Corporation Line
- Observatory Avenue: Edwards Avenue to Delta Avenue

**Police District 3**
- Glenway Avenue: West Corporation Line to West Eighth Street
- Queen City Avenue: Werk Road to Beekman Street
- Harrsion Avenue: West Corporation Line to State Avenue
- Warsaw Avenue: Glenway Avenue to State Avenue
- River Road: West Corporation Line to Evans Street
- Elberon Avenue: West Eighth Street to State Avenue
- Montana Avenue: West Fork Road to Glenmore Avenue
- Westwood Northern Boulevard: Hopple Street to Boudinot Avenue
- Boudinot Avenue: Glenway Avenue to Westwood Northern Boulevard

**Police District 4**
- Ridge Road: Amberly Village Corp. Line to Marburg Avenue
- Montgomery Road: Norwood Corporation Line to Silverton Corporation Line
- Woodburn Avenue: McMillan Street to Dana Avenue
- William Howard Taft Road: Columbia Parkway to Vine Street
- McMillan Street: Central Parkway to Hackberry Street
- Paddock Road: Reading Road to Vine Street
- Gilbert Avenue: Woodburn Avenue to McMillan Street
- Reading Road: Paddock Road to Sunnybrook Drive
- Dana Avenue: Reading Road to Duck Creek Road
- Burnet Avenue: Forest Avenue to Reading Road

**Police District 5**
- Martin Luther King Drive: Central Parkway to Woodburn Avenue
- Ludlow Avenue: Spring Grove Avenue to Jefferson Avenue
- Jefferson Avenue: Nixon to Ludlow
- Hamilton Avenue: Spring Grove Avenue to Hollywood Avenue
- Colerain Avenue: Spring Grove Avenue to Kipling Road
- Burnet Avenue: Forest Avenue to Reading Road
- Jefferson Avenue: McMillan Street to Martin Luther King Drive
- Calhoun Street: Vine Street to Clifton Avenue
- North Bend Road: Vogel Road to Daly Road
APPENDIX C: DEFINITIONS

1. **Snow Season** – December 1 – March 31

2. **Dry Snow** – Occurs when the troposphere temperature (the lowest portion of the Earth’s atmosphere) and the surface temperature fall below freezing causing snow to be less dense than average and not sticky.

3. **Wet Snow** – Occurs when surface temperatures are just above freezing, goes through repeated melt-freeze cycles, forming crust on the surface allowing it to stick together.

4. **Compacted Snow** – Snow which has been compressed into a solid mass that resists further compression and will hold together or break into lumps if picked up.

5. **Slush** – Mixture of small ice crystals and liquid water. Generally forming when snow and/or ice melts.

6. **Chemicals** – Used in conjunction with a solid to help depress the freezing point of water, turning ice or snow into liquid or slush.

7. **De-icing** – A reactive operation. Removal of existing snow, ice or frost from roadway or other surface. Spreading material after snow begins.

8. **Anti-icing** – A proactive operation. Treatment with an ice melting chemical before or during the beginning of a storm to prevent or delay the formation of ice or the adhesion of ice and snow to the surface.

10. **Brine (i.e. wetted salt)** – A solution of salt in water. Can be used to deice or reduce freezing temperatures on roads.

11. **Beet Juice** – Anti-icing fluid is a natural, agricultural product from the juice remaining after sugar beet extraction. Used in conjunction with rock salt.

12. **Calcium Chloride** – Used as anti-icing, pre-wetting solution to help improve the performance of rock salt.

13. **Plowing** – During and after precipitation, plows are utilized to remove higher accumulations of snow before using deicing products. Plowing normally leaves ridges of snow along road edges in front of sidewalks, driveways and parking lanes.

14. **Passable** – Moderately good quality, but less than excellent, capable of being passed, traversed or crossed.

15. **Pre-wetted Salt** – Salt that has been treated with liquid, prior to being spread.

16. **Level 1 Snow Alert** - Roadways are hazardous with blowing and drifting snow.

17. **Level 2 Snow Advisory** – Roadways are hazardous with blowing and drifting snow. Only those who feel it is necessary to drive should be on the roadways. Contact your employer to see if you should report to work.
18. **Level 3 Snow Emergency** – All Municipal, Township, County and State roadways are closed to non-emergency personnel. No one should drive during these conditions unless it is absolutely necessary to travel. Those traveling on the roadways may subject themselves to arrest.

19. **City of Cincinnati Parking Snow Emergency** – The City may issue a parking snow emergency during severe snowstorms. The declaration of a snow emergency initiates parking restrictions on designated routes. Cars, trucks and other motorized vehicles not moved are subject to ticketing and towing. This action assists with the full treatment of City streets in order to make roads passable as soon as practical.
APPENDIX E – PRIVATE STREETS
