Cincinnati Streetcar overhead wires—Testing is underway

The Cincinnati Streetcar team is testing the overhead contact system (OCS) that will provide electrical power for the streetcars.

The wires are located 20 feet above the street to prevent contact by anything other than the streetcar vehicles.

IMPORTANT: This is a high-voltage electrical system.

• For safety’s sake, always assume that the electric is ON.
• Stay at least 10 feet away from the overhead streetcar wires.
• In case of emergency, call 911 immediately.

Doing maintenance near the streetcar OCS wires:

If you are doing maintenance or other activities (using ladders or lifts, utility work, etc.) near the streetcar OCS wires, you must obtain a Right-of-Way Permit from the City of Cincinnati.

To obtain a Right-of-Way permit from the city, contact:

DOTÉ ROW Management Office
801 Plum St., Suite 425
Cincinnati, OH 45202
513-352-3463

Streetcar Construction Hotline 513-352-3333
THE RIGHT ANGLE IS THE BEST ANGLE

Always slow down and cross streetcar tracks at a 60°-90° angle. Crossing incorrectly can result in your front tire sliding on the rail or getting stuck in the gap next to the rail, which can cause you to fall from your bicycle.

In order to cross at the right angle, you may need to turn a little away from the track first, and then cross it. Make sure to slow down first, look behind you, and signal if appropriate.

If you are not comfortable riding over the tracks (because there are multiple tracks at an intersection, difficult track angles, or because of traffic) pull over to the curb, dismount and cross the intersection as a pedestrian.

Streetcar tracks become more slippery when wet. Use caution riding in the rain or in winter weather.
